Core Features (Compulsory)

Please tick the core features that you have completed in this milestone. For Milestone 3, you do not need to tick the features that you have successfully completed in the previous milestone.

Feature	Completed	(FOR TUTOR USE ONLY)
1. Login		
Server-side validation (e.g., informing the user if the username is not registered in the database or if the password is incorrect).		
Each page reflects the user's login status (e.g., the profile/logout button should appear only when the user has logged in).		
Some content should only be visible to logged-in users.		
Choose an appropriate HTTP request method (e.g., GET, POST, PUT, etc.) for client-server communication.		
2. Registration		
Username and email address should be checked to be unique.		
Password strength should be checked.		
The registered user data should be saved in the database.		

Choose an appropriate HTTP request method (e.g., GET, POST, PUT, etc.) for client-server communication.		
3. User Profile		
Create a user profile interface that is only accessible when the user has logged in.		
All the user's information should be fetched from the database.		
4. Cookies		
Use cookies in at least one of the features you implemented.		
5. AJAX		
Use AJAX in at least one of the features you implemented.
